

CT Summation  
Trident Pro™ Powered by  
Wave Software

Other features that come standard with Trident Pro are:

- Native Review Bridge
- Filter/Merge/Split
- Snapshot
- Easy Software download and upgrades
- Tech Support help desk

## Native file processing that gives you the ability to cull, filter and deliver relevant data for your case.

CT Summation Trident Pro is an advanced native and foreign language file processing software written with the beginner in mind. Trident Pro provides the fastest, most accurate de-duplication, near-duplicate detection, regeneration and export of electronic files for discovery. Trident Pro works seamlessly with the CT Summation family of products (Discovery Cracker, iBlaze, Enterprise, CaseVault) for Processing, Review, Evaluation and Production.

### INTEGRATION INNOVATION

Trident integrates seamlessly into the law firm, corporate legal or legal service provider's current workflow processes, allowing users to review electronic data in a standard review tool and isolate the responsive data that can then be delivered to opposing counsel in their native review format. The industry-first, built-in Native Review Bridge capability automatically maps fields and loads data from Trident Pro into the CT Summation family of products. This native review bridge allows for the processing of one gigabyte of data in 10 minutes or less.

### NEAR-DUPLICATE DETECTION

Reliability of near-duplicate detection is enhanced by integrating it within Trident Pro's existing exact-duplication detection. Trident Pro will identify close matches of the documents in a document set. The user can then determine whether or not to export the documents for review based on the how closely the documents are related. This reduces overall discovery processing, review time and discovery costs.

### DE-DUPLICATION

The average set of data results in 20-50 percent of collected content being duplicates. Whether you are dealing with e-mail files or loose files, Trident Pro will set aside duplicate files and produce a clean set of data from which to do your review.

 CT Summation

#### REVIEW SEAMLESSLY

Trident Pro offers Native Review Bridge where it automatically loads data seamlessly into CT Summation family of products so there is no need to create or manage load files. Even from a TIFF review, you can import into Trident Pro. Trident Pro will follow up from whatever you tag in your review tool to generate a PST/NSF of just those tagged items preserving all metadata, chain-of-custody and folder paths.

#### GENERATE WORKFLOW

With the new FRCP rules, you now can produce a native set with ease. Whether it is a PST or NSF, the generator will take a load file of entry IDs from the emails you tagged from iBlaze, Enterprise or CaseVault and generate a new, unique PST or NSF of just that tagged set. This can be kept in its native format with all metadata intact or this greatly reduced set can be converted to TIFF.

#### REPORTS MADE EASY

Our in-depth internal chain-of-custody reports track all activity for every project, including source PST or NSF files, project settings, de-duplication or re-generation method and gigabytes processed down to the megabyte level. Reports can be saved as Excel spreadsheets for easy billing, production and reference.

#### RECOMMENDED TECHNICAL REQUIREMENTS

- Windows 2000 SP4 / XP / Server 2003 SP1 / Vista (with UAC disabled) with .NET 2.0 framework
- Office Suite: Microsoft Outlook 2000 / XP (2002) / 2003 2007, Lotus Notes Client Version 7.0
- Hard Disk: All PSTs must be accessible from local hard drive or network share, not directly from a CD or DVD
- Processor—Intel Celeron 2.2 GHz or better; Data bus speed 400 MHz or better
- Cache Memory Size—256 KB or better; RAM—Installed size 512 MB or better
